XXX CONFIGURATION

¹Max width and height are not necessarily available in combination.
²Specimen size: Nom. 79" x 79".

DESIGN NOTES

- Glass exceeding 100 square feet.
- Authentic 'transition through' threshold.

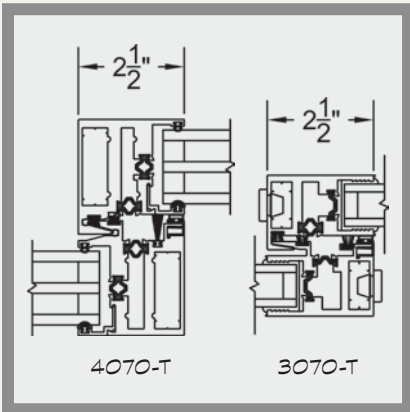

Massive Glass:

The Series 4070-T was created to accommodate new technologies within the insulated glass industry. Fleetwood partners with global minded suppliers that can provide insulated glass units that exceed 100 sqft.

A4 Roller:

The A4 Roller is Fleetwood's third proprietary design. As with the A3 and A2 rollers, the bearings are authentic Swiss precision and assembled in the USA under the careful eye of Fleetwood's Engineering department.

Innovative Interlockers:

Engineers designed a fresh interlocker design that will reduce thermal bowing and accommodate taller panels (20' tall).

Vertically Glazed:

The Series 4070-T was designed to be installed without glass for ease of installation and protection during the construction process.
